

PUSHING BOUNDARIES

A panel on novel research approaches in the field of Human-Machine-Communication

JOIN THE CONVERSATION

Our invited panelists will pitch recent insights from their innovative research projects around two themes with focus on the *mix of different methods* in HMC research and novel ways to *increase ecological validity* of studies. They will describe their method/procedure and how this contributed to unique insights they may not have obtained otherwise. A guided conversation amongst all panelists and together with the audience will allow thorough reflection on the pushed - and perhaps remaining - boundaries in the field.

UPDATES

You will be able to hear about cutting-edge research in the HMC field, learning about new insights and novel methodological approaches that advance scholarship.

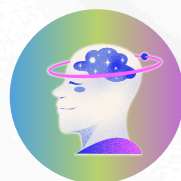

NETWORK

This panel session brings together HMC-researchers that study often similar objectives through different methodological approaches. You can grow your network and build valuable connections to experts on different methodologies.

SKILL-SET

Through the experiences and expertise of our invited panelists, you will get the chance to go outside your own methodological horizon and potentially get inspired to broaden your methodological skill-set.

REFLECTIONS

Together, we will reflect on the boundaries in HMC research that were pushed by these novel approaches, and determine what boundaries still remain.

WE LOOK FORWARD TO WELCOME YOU
